MX150

NEW FOR 2012

Microflex® Subminiature Lavalier Microphones

The Shure Microflex® MX150 is a professional subminiature condenser lavalier microphone ideal for use in speech and other applications requiring low profile, discreet placement. Available in cardioid or omnidirectional patterns, the MX150 provides uncompromised sound quality and high reliability with minimal visibility for use in television broadcasting, corporate lectures, A/V teleconferencing, house of worship, and sound reinforcement.

Features include:

- Available in Cardioid or Omnidirectional polar patterns and TQG (for use in Shure bodypacks) or wired XLR variations
- Sleek, low-profile, design for inconspicuous placement
- Multi-position tie clip allows for a variety of placement options and features an integrated cable management system for convenient cable dress with minimized handling noise
- Kevlar-reinforced soft-flex cable design further reduces handling noise while providing superior flexibility for routing and placement
- Snap-fit, concise windscreen provides protection from plosives and wind noise with minimal visibility
- CommShield® Technology guards against interference from cellular RF devices and digital bodypack transmitters
