HDJ-1500-W
(MATTE WHITE)

Features

① Superb sound quality

With high-quality components, the HDJ-1500s deliver perfectly balanced sound across all frequencies. The headphones feature copper-clad aluminum wire voice coils, large 50 mm driver units, rare earth magnets and 38 µm-thick diaphragms, guaranteeing accurate reproduction of deep base notes and clear delivery of other low to medium frequencies, such as kicks, and snares. Output levels are 1 dB greater than Pioneer's HDJ-1000 headphones, and a lower impedance offers even greater sensitivity, so DJs get pristine sound reproduction every time, regardless of what device the HDJ-1500s are hooked up to.

② Groundbreaking soundproofing component

Monitoring tracks on a heaving dance floor is a breeze with the HDJ-1500s, no matter how rowdy the party gets. Sound insulation around low and medium frequencies (300 Hz to 1,300 Hz) has improved by an impressive 4 dB compared to the HDJ-1000s thanks to the innovative sound-isolation chamber on the bass reflex port, which eliminates background noise.

③ Durable design for professional use

The HDJ-1500s' moving headband and hinges are composed of rugged yet lightweight magnesium alloy to withstand the rigors of professional use.
Plus, the single-sided cable can be easily replaced if it gets damaged, further prolonging the life of the headphones.

④ Supreme comfort with interchangeable urethane foam ear pads

The narrow ear cup design creates a tight seal on your ear to block out external sound, while the low-resilience urethane memory foam ear pads make sure the HDJ-1500s are easy on the ears even during prolonged use. The included ear pads can be replaced with the HDJ-EP01s –open-cup*1 protein leather ear pads which sit around the ears and are sold separately –so DJs can choose the best option to suit their comfort and listening style.

Main specifications
■Description: Enclosed dynamic stereo headphones ■Frequency range: 5 Hz to 30,000 Hz ■Impedance: 32 Ω ■Maximum input: 3,500 mW ■Sensitivity: 108 dB ■Drive units: φ50 mm domes ■Weight: 285 g (excluding cable)
■Cable: 1.2 m single-sided coiled cable (approximately 3.0 m when extended-removable type) ■Plug: φ3.5 mm stereo mini-jack (gold-plated, two-way, screw type) ■Ear pads: Polyurethane (leather type)

Included
■φ6.3 mm standard stereo adapter (gold-plated, screw type) ■Carrying pouch

Features

① Clearly reproduces the midrange, including the kick and snare sounds that are essential for mixing.

HDJ-500 HDJ-500T

The newly developed 40 mm driver unit includes a strong rare earth magnet. The reduced inner diameter of the ear pads increases the sound pressure to provide a rich low range. The voice coil now uses a thicker diaphragm of 19 µm and copper-clad aluminum wiring (CCAW) to clearly reproduce the midrange, including the kick and snare sounds vital for DJ mixing. With these headphones, even inexperienced DJs can easily grasp a song's tempo.

② Listen your way HDJ-500 HDJ-500T

These headphones work with single-ear and other monitoring styles thanks to the 60° swivel mechanism on the right housing and a headband that is flexible yet still maintains lateral pressure.

③ Move how you want to move HDJ-500

The single-sided replaceable cords give you freedom of movement. The included 1.2 m coiled cord (maximum extension: approximately 3 m) and 1 m straight cord give you options for various listening situations, whether in performance or just on the street.

④ Comes with a single-sided straight cord with a microphone and phone button for hands-free calling, even when listening to music on your mobile phone

HDJ-500T

In addition to the 1 m straight cord with a microphone and phone button, a 1.2 m side mount coil cord is also included. Press the phone button to quickly answer the phone and start a hands-free call, even when listening to music on your mobile phone. The single-sided cord gives you freedom of movement while DJing or listening to music outside. (*The straight cord cannot be connected to the φ6.3 mm 3P plug adapter.)

Main specifications
■Description: Enclosed dynamic stereo headphones ■Frequency range: 5 Hz to 28,000 Hz ■Impedance: 45 Ω ■Maximum input: 2,000 mW ■Sensitivity: 105 dB ■Weight: 195 g (excluding cable)
