High quality sound, fit, and durability required by top DJs.
Our flagship model of professional DJ headphones that reached the ultimate level.

HDJ-2000
(SILVER)

HDJ-2000-K
(CHROME BLACK)

HDJ-2000-W
(MATTE WHITE)

Features

① Designed for the high quality sound required by DJs

Includes various innovations to accurately recreate highs and lows so you can catch every beat.

●Employs a 38 µm-thick diaphragm ●Voice coil with the optimal winding width and number of windings
●A 50 mm driver unit with a high force magnet ●Advanced sound insulation properties
●Carefully tested inner dampening material ●Sealed ear pads

② Perfect fit and lightweight for extended DJing

The surfaces of the ear pads and head pads are made of protein leather*1 for great feel and flexibility.
Low-rebound urethane*2 is used on the inside to form to the shape of your head and provide a stable fit. The main unit is made of a magnesium alloy that is both lightweight and durable. These qualities provide excellent comfort for lengthy DJ sessions.

③ Strong enough for intense performances of professional DJs

We have improved the durability of the headphone plug and headphone/cable connector to provide the durability required for professional use. An exchangeable Mini XLR connector has been used for the rare cases that the cable is damaged.

④ Sturdy, Stylish Design and Construction

With a new i-type hinge, a smooth and integral form has been achieved that naturally fits the hands at any time during DJ performance. The headphone's ear pads have a spun finish aluminum ring that matches the design of Pioneer's CDJ players' "play/cue" buttons for a cohesive stylish design.

Main specifications ■Description: Enclosed dynamic stereo headphones ■Frequency range: 5 Hz to 30,000 Hz ■Impedance: 36 Ω ■Maximum input: 3,500 mW ■Sensitivity: 107 dB ■Drive units: φ50 mm domes ■Weight: 290 g (excluding cable)
