Lodo

The large-sized professional screen.

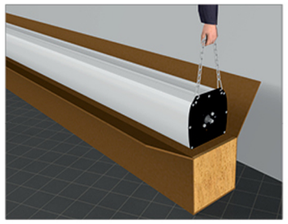

The mechanics are made entirely of solid aluminium components and the matt white box is available in matt black on request. It mounts front, retro-projection or sound-transferring Microperforated fabrics up to 700 cm base, with or without black borders.

Thanks to the geometry of the brackets, it is possible to hang it on a wall, from or behind a beam. The chains provided, if correctly fixed, ensure even more safety in compliance with TUV safety regulations and prove very useful when moving the screen during installation.

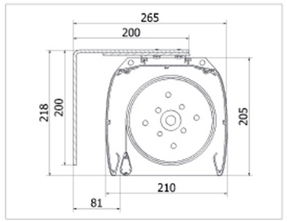

The oversized motor is provided with thermal protection and the stop buffers can be adjusted by remote control.

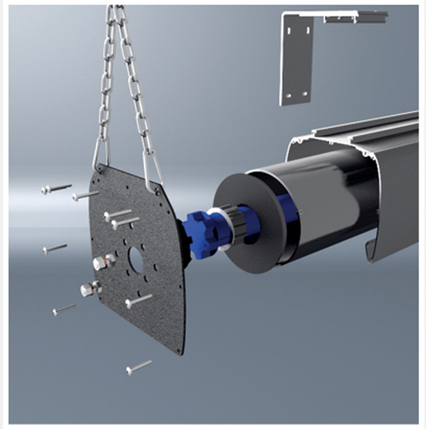

The solid packaging is strengthened by steel bars which reinforce the cardboard thus protecting the box from possible damage during transport.

Technical details

Screen characteristics

- 100% aluminium mechanics
- electric diverter included
- wide range of fabrics and sizes
- quick&safe mounting system
- customized sizes
- safety anchor chains
- steel reinforced cardboard packaging

Available fabrics

- White Ice
- Home Vision
- Perforated sound-transferring
- Coral retro-projection
